

## Medication

March 2024

At YMCA Childcare we promote the good health of children attending the setting and take necessary steps to prevent the spread of infection (see sickness and illness and infection control policies). If a child requires medicine we will obtain written information about the child's needs for this, and will ensure this information is kept up to date. We follow strict guidelines when dealing with medication of any kind in the setting and these are set out below.

### **Medication prescribed by a doctor, dentist, nurse or pharmacist**

*(Medicines containing aspirin will only be given if prescribed by a doctor)*

- Prescription medicine will only be given when prescribed by the above and for the person named on the bottle for the dosage stated
- Medicines must be in their original containers with their instructions printed in English
- Those with parental responsibility for any child requiring prescription medication should hand over the medication to the most appropriate member of staff who will then note the details of the administration on the appropriate form and another member of staff will check these details
- Those with parental responsibility must give prior written permission for the administration of each, and every, medication. However, we will accept written permission once for a whole course of medication or for the ongoing use of a particular medication under the following circumstances:
  1. The written permission is only acceptable for that brand name of medication and cannot be used for similar types of medication, e.g. if the course of antibiotics changes, a new form will need to be completed
  2. The dosage on the written permission is the only dosage that will be administered. We will not give a different dose unless a new form is completed
  3. Parents must notify us IMMEDIATELY if the child's circumstances change, e.g. a dose has been given at home, or a change in strength/dose needs to be given.
- Staff will not administer a dosage that exceeds the recommended dose on the instructions unless accompanied by written instructions from a relevant health professional such as a letter from a doctor or dentist
- The parent must be asked when the child has last been given the medication before coming to the setting; and the staff member must record this information on the medication form. Similarly, when the child is picked up, the parent or guardian must be given precise details of the times and dosage given throughout the day. The parent's signature must be obtained at both times

## Medication

March 2024

- 
- At the time of administering the medicine, a senior member of staff will ask the child to take the medicine, or offer it in a manner acceptable to the child at the prescribed time and in the prescribed form. (It is important to note that staff working with children are not legally obliged to administer medication)
  - If the child refuses to take the appropriate medication, then a note will be made on the form
  - Where medication is "essential" or may have side effects, discussion with the parent will take place to establish the appropriate response.

### **Non-prescription medication (*these will not usually be administered*)**

- The staff will not administer any non-prescription medication containing aspirin
- The staff will only administer non-prescription medication for a short initial period, dependant on the medication or the condition of the child. After this time medical attention should be sought
- If the staff feel the child would benefit from medical attention rather than non-prescription medication, we reserve the right to refuse childcare until the child is seen by a medical practitioner
- If a child needs liquid paracetamol or similar medication during their time at the setting, such medication will be treated as prescription medication with the onus being on the parent to provide the medicine unless in an emergency situation with the setting providing one specific type of medication should parents wish to use this
- On registration, parents will be asked if they would like to fill out a medication form to consent to their child being given a specific type of liquid paracetamol or anti-histamine in particular circumstances such as an increase in the child's temperature or a wasp or bee sting. This form will state the dose to be given, the circumstances in which this can be given e.g. the temperature increase of their child, the specific brand name or type of non-prescription medication and a signed statement to say that this may be administered in an emergency if staff CANNOT contact the parent
- An emergency setting supply of fever relief (e.g. Calpol) and anti-histamines (e.g. Piriton) will be stored on site. This will be checked at regular intervals by the designated trained first aider to make sure that it complies with any instructions for storage and is still in date
- If a child does exhibit the symptoms for which consent has been given to give non-prescription medication during the day, the staff will make every attempt to contact the child's parents. Where parents cannot be contacted then the Childcare manager, or senior member of staff, will take the

March 2024

---

decision as to whether the child is safe to have this medication based on the time the child has been in the setting, the circumstances surrounding the need for this medication and the medical history of the child on their registration form.

- Giving non-prescription medication will be a last resort and the childcare staff will use other methods first to try and alleviate the symptoms, e.g. for an increase in temperature the nursery will remove clothing, use fanning etc. The child will be closely monitored until the parents collect the child. For any non-prescription cream for skin conditions e.g. Sudocrem, prior written permission must be obtained from the parent and the onus is on the parent to provide the cream which should be clearly labelled with the child's name
- If any child is brought to the setting in a condition in which he/she may require medication sometime during the day, the manager will decide if the child is fit to be left at the setting. If the child is staying, the parent must be asked if any kind of medication has already been given, at what time and in what dosage and this must be stated on the medication form
- As with any kind of medication, staff will ensure that the parent is informed of any non-prescription medicines given to the child whilst at the setting, together with the times and dosage given
- The setting DOES NOT administer any medication unless prior written consent is given for each and every medicine.

### Antibiotics

Children on Antibiotics as a short term medication should remain at home for **48 hours** after the first dose. This is to ensure no adverse side effects to the medicine they have been given. If the child does not display any symptoms and seems ok, they can return to the setting after this 48 hour period.

### Injections, pessaries, suppositories

As the administration of injections, pessaries and suppositories represents intrusive nursing, we will not administer these without appropriate medical training for every member of staff caring for this child. This training is specific for every child and not generic. The setting will do all it can to make any reasonable adjustments including working with parents and other professionals to arrange for appropriate health officials to train staff in administering the medication.

### Childhood Immunisations

Children who have received any of the regular childhood immunisations must not attend the setting for **24 hours** after receiving the immunisation. This is to ensure

no adverse side effects to the medicine they have been given. If the child does not display any symptoms and seems ok, they can return to the setting after this 24 hour period.

There is no exclusion for any children receiving the flu nasal spray.

### Staff medication

All childcare staff have a responsibility to work with children only where they are fit to do so. Staff must not work with children where they are infectious or feel unwell and cannot meet children's needs. This includes circumstances where any medication taken affects their ability to care for children, for example, where it makes a person drowsy.

If any staff member believes that their condition, including any condition caused by taking medication, is affecting their ability to care for children they must inform their line manager and seek medical advice. The Childcare manager or in their absence the duty manager will decide if a staff member is fit to work, including circumstances where other staff members notice changes in behaviour suggesting a person may be under the influence of medication. This decision will include any medical advice obtained by the individual or from an occupational health assessment.

Where staff may occasionally or regularly need medication, any such medication must be kept in the person's locker/separate locked container in the staff room or childcare room where staff may need easy access to the medication such as an asthma inhaler. In all cases it must be stored securely out of reach of the children, at all times. It must not be kept in the first aid box and should be labelled with the name of the member of staff.

### Storage

All medication for children must have the child's name clearly written on the original container and kept in a closed box, which is out of reach of all children.

Emergency medication, such as inhalers and EpiPens, will be within easy reach of staff in case of an immediate need, but will remain out of children's reach. Any antibiotics requiring refrigeration must be kept in a fridge inaccessible to children.

All medications must be in their original containers, labels must be legible and not tampered with or they will not be given. All prescription medications should have the pharmacist's details and notes attached to show the dosage needed and the
